OBJECTIVE

Motivated and technically skilled student with hands-on experience in Cisco networking, cybersecurity labs, and cloud fundamentals. Seeking an internship or entry-level role in networking, cybersecurity, or cloud infrastructure where I can contribute, grow, and apply my practical skills in real-world environments.

EDUCATION

Newport High School – Bellevue, WA

Expected Graduation: June 2026

- Cisco Networking Academy Student
 - Relevant Coursework: CCNA, Cybersecurity Essentials, Cloud Fundamentals
-

TECHNICAL SKILLS

Networking & Security: Cisco IOS, Packet Tracer, DHCP, NAT, VLANs, Subnetting, BGP, OSPF, EIGRP, ACLs, Layer 2 Attacks, Switch Port Security, DHCP Snooping, ARP Inspection

Cybersecurity: Wireshark, Yersinia, Dsniff, Kali Linux, ARP Spoofing, MAC Flooding, DHCP Starvation, Network Reconnaissance, Port Scanning

Cloud & Systems: Azure Fundamentals (AZ-900 prep), AWS basics, Linux CLI, Bash scripting, Virtual Machines

Tools & Technologies: Cisco Packet Tracer, PuTTY, Linux/Ubuntu, Wireshark, GitHub, Microsoft 365, Windows Server

Soft Skills: Problem-solving, team collaboration, communication, documentation, critical thinking

PROJECTS & LAB EXPERIENCE

Layer 2 Attacks and Mitigations Lab

- Performed MAC Flooding, ARP Spoofing, and DHCP Starvation attacks using Kali Linux tools (Yersinia, Dsniff)
- Applied port-security, ARP inspection, and DHCP snooping to harden Layer 2 network infrastructure
- Used Wireshark to analyze traffic and confirm vulnerability exploitation and resolution

Amazon Cloud Foundations Labs (1–6)

- Deployed and managed AWS cloud resources using the Management Console
- Created and configured S3 buckets, EC2 instances, and IAM roles
- Explored core AWS services related to storage, compute, and networking

Cisco Multiple SSID Wireless Lab (WPA2 PSK & WPA2 Enterprise)

- Configured Cisco WAPs with multiple SSIDs for secure segmentation
- Integrated WPA2-PSK and WPA2-Enterprise authentication methods
- Verified connectivity and isolation through testing with client devices

IS-IS Integrated Services Lab

- Configured IS-IS routing protocol to enable communication across a simulated enterprise network
- Integrated services routing with efficient Layer 3 path selection
- Verified route convergence and connectivity across multiple routers

Interior and Exterior BGP Labs

- Configured both IBGP and EBGP peerings across routers in different ASes
- Demonstrated route advertisement, path selection, and BGP attributes
- Troubleshoot reachability and manipulated BGP policies

Multi-area OSPF Lab

- Set up OSPF across multiple areas to simulate scalable enterprise routing
- Verified LSAs and router role responsibilities
- Implemented proper area boundaries and ensured optimal route propagation

Windows Format and Install Lab

- Performed clean installation and configuration of Windows OS
- Partitioned drives, applied file system formats, and configured user permissions
- Practiced proper OS setup and basic system hardening steps

AI Lab – On-Premises Local AI System Deployment

Built and configured a fully local AI system capable of providing private, high-performance generative AI services to users on the same network. Deployed the system on dedicated on-premises hardware to improve security, reduce reliance on external cloud services, and enable faster, more reliable access for internal users. Demonstrated how organizations can centralize AI resources, optimize hardware usage, and support multiple departments with tailored AI capabilities.

EXPERIENCE

Director of Marketing and Business Development – WLCOME (Remote)

Spring 2024 – Past

- Led strategic marketing and branding initiatives to grow online presence and user engagement
- Worked with the product and tech teams to improve user communication and accessibility
- Developed outreach strategies and supported partnership opportunities for platform expansion

Beta Tester – Apollo AI

Spring 2025 – Present

- Tested beta versions of AI software, identifying bugs and providing feedback on usability and performance
- Collaborated with the Apollo AI development team to suggest UI/UX improvements and feature ideas

- Helped shape user experience by offering detailed testing reports and documenting edge case issues

CERTIFICATIONS

- **Cisco Networking Essentials** (in progress / completed)

ADDITIONAL INFORMATION

- Passionate about network security and ethical hacking
- Eager to pursue a long-term career in cybersecurity or network engineering
- Available for internships during summer or after school hours
